Jake Hart

Software Developer | jmhart98.github.io
Greater Chicago Area

Summary

Software developer with hands-on experience in C++, Python, and SQL, plus HTML/CSS and Bash scripting. Comfortable working with Git and GitHub across Linux, Windows, and iOS environments. Currently studying Software Development at College of DuPage while working full-time in precision manufacturing, where I independently maintain a department's production workflow. Self-directed learner with a systematic, detail-oriented approach to problem-solving, seeking an entry-level role in backend development, database systems, or application development.

Experience

Nidec Drive Technology Corporation
Mechanical Assembler
April 2022 - Present (4 years 7 months)
Glendale Heights, IL

Independently maintained production for the power transmission department since October 2022, handling all priorities and workflow. Expected to build 50-80 industrial gearbox drives per month, managing each unit from parts picking through assembly, painting, inspection, documentation, and packaging. Following detailed technical specifications for multi-component systems where accuracy directly affects product reliability. Diagnosing and resolving assembly issues methodically, a troubleshooting approach I also apply to debugging code.

Education

College of DuPage
Associate in Applied Science, Software Development · (June 2027)
